

CITRUS GREENING PROGRAMS - FREE

Citrus Greening Disease was found in a commercial grove in San Juan, Texas last month. Citrus greening is a devastating bacterial disease that affects the production, quality, and appearance of citrus trees.

If you're interested in learning more about Citrus Greening Disease, the Hidalgo County Master Gardeners will have several slide presentations on Citrus Greening in the afternoons and evening. We will also have handouts regarding chemicals that are safe to use, including organic controls, because we all need to treat our citrus to protect our trees and this valuable industry.
